PREOPERATIVE IMAGING: KNEE REPLACEMENT

You are a candidate for knee replacement, and we are here to guide you through your surgical experience to ensure an optimal recovery. Dr. Obermeyer offers state of the art robotic knee replacement, where the prosthetic knee components are implanted with computer guidance, allowing correction of deformity, precision of ligament balance and motion, and optimizing longevity of the knee prosthesis.

- Preoperative CT scan is required for robotic knee replacement. This is for defining the three-dimensional anatomy of your knee. We generally recommend the scan be completed at St. Alexius Medical Center, where they have the specific protocol and knowledge of how the scan is done.
- Please schedule the scan early so there is sufficient time to process the information. The scheduling line at St. Alexius Medical Center is (877)717-7700. We will work with insurance to authorize the scan. If you will be having this scan done elsewhere, please inform us at (847)285-4390.

[] Follow-up

- Once the scan is completed, we recommend you scheduled a preoperative appointment to confirm we have the required information, and to review the plan for recovery.
- Your postop appointments are scheduled with both Dr. Obermeyer and his physican assistant and will be scheduled after your surgery.

Please contact our office with any questions at (847) 285-4318.
